

FIXED-SCOPE DIAGNOSTIC · 2 DAYS

AI Clinical Safety Readiness Review

Know whether your clinical AI will stand up to a Trust board or the regulator **before you deploy, not after.**

Deployment is outrunning governance. Most AI safety work is documented after the fact - a policy filed, a safety case shelved - and never tested against how clinicians actually behave under pressure. When a board or the MHRA asks "how do you know this is safe?", a folder of documents is not an answer.

WHAT IT IS

A focused, two-day review of your clinical AI against the standards the NHS holds you to - DCB0129 and DCB0160. You get a clear, evidenced picture of where you stand and what to fix first. No retainer, no open-ended scope.

WHO IT IS FOR

Digital health vendors and NHS teams moving a clinical AI product from pilot towards live deployment - and anyone who needs to show, not just say, that it is safe.

WHAT YOU GET

01 / SCORECARD

Readiness scorecard

Your AI rated RAG against the core DCB0129 / 0160 requirements.

02 / FINDINGS

Prioritised findings

The specific gaps that would fail a board or regulator question, ranked by clinical risk.

03 / DIRECTION

Clear next step

Whether you need a full safety case, targeted remediation, or are ready to proceed.

04 / READOUT

Team readout call

A 45-minute session walking your team through the findings and the priorities.

READINESS SCORECARD

// EXAMPLE OUTPUT

Intended use & scope defined	
Hazard identification & risk register	
Clinical risk controls evidenced	
Clinical safety case report	
Post-deployment monitoring plan	

ON TRACK GAPS TO CLOSE NOT YET EVIDENCED

INVESTMENT

£2,500

Fixed scope. Fixed price.
Delivered within two weeks.

WHERE THIS LEADS

Readiness
Review

→ DCB0129 / 0160
Safety Case

→ Ongoing CSO
cover

The review is step one. Most clients use it to scope the safety case and clinical safety officer support that follow - so you start with clarity, not a commitment.
